

## Feature Promotion of SDGs (Sustainable Development Goals) and Science and Technology Innovation

1	What are the SDGs adopted at the United Nations?—The SDG's Relationship with Science and Technology Innovation (STI) and Their Importance	
	(1) Background to the formulation of the SDGs at the United Nations and the specifics of the goals.	1
	(2) SDGs' relationship with Science and Technology Innovation (STI) and their importance	2
2	Governmental Initiatives to Achieve the SDGs	
	(1) The government's eight priority areas concerning the SDGs	3
	(2) SDGs-related initiatives conducted by the government and individual ministries	4
3	Introduction of Examples of STI Contributions to the Achievement of SDGs in Japan	
	(1) Initiatives by universities and research institutions	5
	(2) Initiatives by the private sector, etc.	7
	(3) Regional initiatives	9
4	Future Outlook	10

## Part 1 For Further Reinforcing the Fundamental Capability for STI

### Chapter 1 Reality of and Challenges to Fundamental Capability for STI

#### Section 1: Why is the reinforcement of fundamental capability necessary?

1	Role of fundamental capability in creating science, technology and innovation	13
2	Diversification of process of and acceleration of speed of innovation	14
3	Need and importance of further reinforcing fundamental capability	15

#### Section 2 Current state of and challenges to fundamental capability

1	International fundamental capability comparison	
	(1) Science, technology and innovation policy trends of major countries	16
	(2) International comparison of principal indexes	23
	(3) For Analysis in the following section	43
2	Analysis of Japan's fundamental capability and extraction of problems	
	2-1 Human resources	
	(1) Doctoral students and young researchers	44
	(2) Diversity and mobility of human resources	68
	2-2 Knowledge Infrastructure	
	(1) Academic and Basic Research	91
	(2) Research Facilities and Equipment and Information Infrastructure	102
	(3) Research hours	109
	(4) Institutional systems related to Research and Development	120
	2-3 Research Funds	
	(1) Total R&D Expenditure in Japan	125
	(2) R&D Expenditure of Universities, National R&D Agencies, etc.	129

2-4 A Bird's Eye View on the Current Situation and Issues Surrounding Japan's Fundamental STI Capability ..... 141

**Chapter 2** Measures to Reinforce the Fundamental Capability for Science, Technology and Innovation

1 Major Topics Being Discussed by Government Organizations

(1) Council for Science, Technology and Innovation (CSTI) ..... 143

(2) Council on Investments for the Future ..... 143

(3) Council on Economic and Fiscal Policy ..... 143

(4) Council for Designing 100-year Life Society ..... 144

(5) Council for Science and Technology (CST)/Central Council for Education (CSTP) ..... 144

(6) Others ..... 144

2 Direction of Future Measures for the Reinforcement of the Fundamental STI Capability

(1) Efforts Required of the Government ..... 145

(2) Efforts Required for Universities, National Research and Development Agencies, and Other Research Institutions ..... 146

(3) Efforts Required of the Private Sector ..... 146

(4) Others ..... 146

Conclusion ..... 148

## Part II Measures Implemented to Promote Science and Technology

### Chapter 1 Development of Science and Technology

Section 1	The Science and Technology Basic Plan.....	153
Section 2	Council for Science, Technology and Innovation	
1	Major Endeavors of CSTI in FY2017.....	156
2	Strategic Prioritization in the Science and Technology-related Budget.....	157
3	R&D Evaluation of Projects of National Importance .....	160
4	Major Deliberations at Expert Panels .....	161
Section 3	Comprehensive Strategy on Science, Technology and Innovation .....	162
Section 4	Administrative Structure and Budget for Science, Technology and Innovation Policies	
1	Administrative Structure for Science, Technology and Innovation Policies .....	164
2	Science and Technology Budgets.....	167

### Chapter 2 Acting to Create New Value for the Development of Future Industry and Social Transformation

Section 1	Fostering R&D and Human Resources that Boldly Challenge the Future.....	170
Section 2	Realizing “Society 5.0”	
1	Vision of Society 5.0.....	170
2	Undertakings necessary for the realization .....	172
Section 3	Enhancing Competitiveness and Consolidating Fundamental Technologies in Society 5.0	
1	Efforts necessary for enhancement of competitiveness.....	172
2	Strategic strengthening of infrastructure technology .....	174

### Chapter 3 Addressing Economic and Social Challenges

Section 1	Sustainable Growth and Self-sustaining Regional Development	
1	Ensuring stable energy, resources, and food.....	181
2	Achieving a sustainable society to handle hyper-aging, depopulation, etc.....	194
3	Improving competitiveness in manufacturing and value creation.....	205
Section 2	Ensure Safety and Security for Our Nation and its Citizens and a High-quality, Prosperous Way of Life	
1	Addressing natural disaster .....	207
2	Ensuring food safety, living environments, and occupational health .....	216
3	Ensuring Cybersecurity .....	220
4	Addressing national security issues .....	221
Section 3	Addressing Global Challenges and Contributing to Global Development	
1	Addressing global climate change.....	226
2	Responding to biodiversity loss.....	232

Section 4 Pioneering Strategically Important Frontiers

- 1 The promotion of oceanographic R&D..... 233
- 2 Promotion of R&D in space science..... 235

**Chapter 4 Reinforcing the Fundamental Capability for STI**

Section 1 Developing High-quality Human Resources

- 1 Developing, securing and improving career prospects of human resources as intellectual professionals..... 244
- 2 Promoting diversity and career mobility ..... 255

Section 2 Promoting Excellence in Knowledge Creation

- 1 Promoting academic and basic research as a source of innovation..... 260
- 2 Strategic enhancement of common-platform technology, facilities, equipment, and information infrastructure supporting research and development activity..... 266
- 3 Promotion of open science..... 278

Section 3 Strengthening Funding Reform

- 1 Fundamental funds reform..... 280
- 2 Reform of public funds ..... 281
- 3 Integrated promotion of the national university reform and the research funding reform ..... 284

**Chapter 5 Establishing a Systemic Virtuous Cycle of Human Resources, Knowledge and Capital for Innovation**

Section 1 Enhancing Mechanisms for Promoting Open-innovation

- 1 Enhancing systems of promotion in companies, universities, and public research institutes..... 286
- 2 Inducing a virtuous cycle of human resources for innovation creation..... 291
- 3 Creating “spaces for co-creation” to concentrate human resources, knowledge, and capital..... 292

Section 2 Enhancing the Creation of SMEs and Startup Companies to Tackle New Business Opportunities

- 1 Cultivating an entrepreneurial mentality..... 296
- 2 Promoting the creation of startup companies at universities..... 296
- 3 Creating environments conducive to new business ..... 297
- 4 Helping initial demand and endorsing the trustworthiness of new products and services..... 298

Section 3 Strategic Use of International Intellectual Property and Standardization

- 1 Promoting use of IP assets in innovation creation ..... 298
- 2 Accelerating strategic international standardization and enhancing related support systems... 300

Section 4 Reviewing and Improving the Regulatory Environment for Innovation

- 1 Reviewing systems in accordance to new products, services, and business models..... 303
- 2 Improving IP systems in response to the tremendous development in ICT ..... 303

Section 5 Developing Innovation Systems that Contribute to “Regional Revitalization”

- 1 Revitalizing regional companies ..... 304
- 2 Driving innovation systems that make use of local characteristics..... 306
- 3 Promoting policies that encourage local initiative..... 308

## Section 6 Cultivating Opportunities for Generating Innovation in Anticipation of Global Needs

- 1 Promoting R&D that anticipates global needs ..... 308
- 2 Developing systems to promote inclusive innovation ..... 309

## Chapter 6 Deepening the Relationship between STI and Society

---

### Section 1 Promoting Co-creative STI

- 1 Dialogue and collaboration with stakeholders ..... 310
- 2 Stakeholder initiatives for co-creation ..... 310
- 3 Scientific advice for policymaking ..... 312
- 4 Ethical, legal, and social initiatives ..... 313

### Section 2 Ensuring Research Integrity ..... 314

## Chapter 7 Enhancing the Capacity to Promote Science, Technology and Innovation

---

### Section 1 Reforming Universities and Enhancing their Function

- 1 University Reform ..... 315

### Section 2 Reforming National R&D Agencies and Enhancing their Function

- 1 National R&D Agency Reforms ..... 316

### Section 3 Strategic International Implementation of STI Policies

- 1 Utilization of international frameworks ..... 317
- 2 Utilization of international organizations ..... 321
- 3 Utilization of research institutions ..... 323
- 4 Promotion of Strategic International Activities Related to Science Technology Innovation ..... 323
- 5 Cooperation with Other Countries ..... 323

### Section 4 Pursuing Effective STI Policies and Enhancing the Chief Controller Function

- 1 Following up the Basic Plan ..... 326
- 2 National Guideline on the Method of Evaluation for Government R&D ..... 326
- 3 Promoting Policies Supported by Objective Evidence ..... 327
- 4 Strengthening the Leadership Functions of the CSTI ..... 328

### Section 5 Ensuring R&D Investment for the Future ..... 329

## Scientific and Technological Achievements Which Contribute to Daily Life ..... 332

---

## Figures & Tables

### Feature

Feature Figure 1	The government's eight priority areas concerning the SDGs .....	4
------------------	---	---

### Part I

Table 1-1-1	Science, technology and innovation policies of major countries .....	18
Table 1-1-2	Changes in population and workforce (in thousands) in major countries.....	19
Figure 1-1-3	Changes in GDP of major countries.....	20
Figure 1-1-4	Changes in science and technology-related government budgets of the major countries.....	21
Figure 1-1-5	Changes in the major countries' science and technology-related budgets, using the base figure of 100 for fiscal 2000 .....	21
Table 1-1-6	Comparison of the countries' tax systems for research and development.....	22
Figure 1-1-7	Indirect government support for corporate research and development programs in the major countries) .....	23
Figure 1-1-8	Indexes in WEF Global Competitive Report.....	24
Figure 1-1-9	Changes in the number of PCT member countries and number of PCT applications.....	25
Figure 1-1-10	No. of international PCT applications by country of residence of applicants.....	26
Figure 1-1-11	Changes in the value of technology trade by the major countries.....	27
Figure 1-1-12	Changes in the number of patent rights held in Japan .....	27
Figure 1-1-13	Changes in the number of patent applications made by universities, etc.....	28
Figure 1-1-14	Changes in the number of patents granted by universities, etc.....	29
Figure 1-1-15	Changes in the number of venture businesses established from universities, etc.....	30
Table 1-1-16	Main venture businesses originated from universities, etc.....	30
Table 1-1-17	Comparison between top 10 Japanese and U.S. enterprises in market capitalization (as of 2000 and 2018).....	31
Figure 1-1-18	Changes in the number of researchers in Japan.....	32
Figure 1-1-19	Sector-by-sector numbers of researches in the major countries.....	33
Figure 1-1-20	Changes in the number of papers in the major countries.....	34
Table 1-1-21	Number of papers and number of adjusted top 10% papers by country/region: top 10 countries/regions .....	35
Figure 1-1-22	Ratio of adjusted top 10% papers to article numbers in the major countries (Q factor).....	35
Figure 1-1-23	Sector-by-sector number of papers in Japan and sector-by-sector ratio of papers in Japan.....	36
Figure 1-1-24	Changes in Japan's global rankings in the number of papers and number of papers drawing strong attention (top 10% and top 1%).....	37
Figure 1-1-25	Percentage changes in the number of papers and number of adjusted top 10% papers over the past 10 years .....	38
Figure 1-1-26	Changes in R&D expenditures in the major countries .....	39
Figure 1-1-27	Changes in the ratio of R&D expenditures to GDP in the major countries .....	39
Figure 1-1-28	Sector-by-sector ratios of R&D expenditures used .....	40

Figure 1-1-29	Purpose-based ratios of R&D expenditures in the major countries .....	41
Table 1-1-30	Status of Japanese universities in main world university rankings .....	42
Table 1-1-31	Differences between THE Rankings and QS Rankings .....	43
Figure 1-1-32	Changes in the sectoral number of researchers in Japan.....	45
Figure 1-1-33	Changes in the number of graduate students.....	46
Figure 1-1-34	Changes in the number of students enrolling in the doctor's course.....	46
Figure 1-1-35	Changes in the number of students completing the master's course and the number of students advancing to the doctor's course .....	47
Figure 1-1-36	Changes in the sectoral number of enrollees in the doctor's course.....	48
Figure 1-1-37	Changes in the number of people completing the doctor's course.....	48
Figure 1-1-38	International comparison of the number of doctorate holders per population of 1 million .....	49
Figure 1-1-39	Combination of article authors' positions and titles divided by entities they belong to (Ratio of research teams corresponding to combinations in 2004 to 2012) .....	50
Table 1-1-40	Ratio (by structure of research teams) to the number of adjusted top 10% papers [research teams at universities, etc. and public research organs 2004-2012].....	51
Table 1-1-41	Q factor for papers subject to the survey (by the structure of research teams [at universities, etc. and public research organs, 2004-2012].....	51
Table 1-1-42	Starting age of studies that led to the reception of the Nobel Prize, years spent before winning the prize and average winning age .....	52
Table 1-1-43	Survey of education for young people wishing to become researchers.....	53
Figure 1-1-44	Important conditions to take into account in considering whether to advance to the doctor's course.....	54

## Example Cases

1	Education and Research on Mechanism Analysis of Long-term Climate Change .....	5
2	Valorization of Bio-resources based on Scientific Evidence in Semi- and Arid Land for Creation of New Industry .....	6
3	Support for Female Students in Choosing Science Courses .....	6
4	Towards an Energy Efficient Society beyond LED .....	7
5	“Remix Water” Energy-Saving Seawater Desalination and Water Reuse Integrated System.....	8
6	STEM Education Programs to enhance problem solving skills .....	9
7	Initiative by Shimokawa Town, Hokkaido.....	10

## Columns

2-1	Key science and technology achievements since the Meiji Period .....	156
2-2	Build an agricultural data coordination platform – toward realization of Society 5.0 in agriculture.....	171
2-3	Development of sensor displays wearable on skin .....	177
2-4	Developing agricultural machinery automation technologies .....	193
2-5	Establishing the Japan Medical Research and Development Awards.....	201
2-6	One research result contributes to various problem solutions - Research results of the Innovative Science & Technology Initiative for Security.....	225
2-7	High-precision positioning by Quasi-Zenith Satellite System MICHIBIKI .....	238
2-8	Is this space alchemy? – Heavy element formation found by new astronomy.....	242
2-9	What kind of R&D evaluation will promote development and support for young researchers? -FY2017 MEXT R&D Evaluation Symposium-.....	247
2-10	Current state of scientific research in Japan as featured by the international science journal Nature.....	263
2-11	20 years after the commencement of the service of SPring-8.....	269
2-12	Convening the 2nd International Space Exploration Forum (ISEF2).....	320
2-13	Promotion of Evidence-based Policymaking (EBPM).....	328

### Scientific and Technological Achievements Which Contribute to Daily Life

①	Non-Destructive Observation Using Cosmic Rays and Terahertz Waves .....	333
②	Development of Products That Fulfill the Needs in the Nursing Care Field.....	334
③	New Breed Improvement Techniques .....	335
④	Treating While Observing: A Nanodrug Delivery System .....	336
⑤	Infrastructure Development Using a Supercomputer and AI .....	337
⑥	Development and Recommendation of Shoes for Leading a Vibrant Life .....	338
⑦	Safer Security Technologies.....	339
⑧	Various Uses of Geological Information .....	340
⑨	Utilizing Ocean-Bottom Seismometer Networks for Railway Safety .....	341
⑩	For More Precise Definition of Units of Physical Quantities .....	342
